

Parking lot USB exercise

Contents	<i>There are two files, one is called “Family photos” that contains PII and the other is called “Our dog pics”. There are no sensitive information. It’s not safe to store work files with personal files.</i>
Attacker mindset	<i>An attacker can use this information to send phishing emails or blackmail Jorge for personal gain however this information does not provide access to the business.</i>
Risk analysis	<i>Educating employees and spreading awareness is important so that if an event or circumstance like this ever occur, they should know what to do in this situation. For example, Malicious actors can plot a ransomware in USB stick and drop it intentionally to the office area so it can be discovered by employee. Mostly, employee plug it in their working device to check what’s inside. It led to threat actor getting access to the company’s system.</i>
